January 6, 2018

I. SUMMARY OF THE 2 WEEKS

During 2 weeks, I tried to implement registration part by geometric feature methods according to documents that I uploaded github. But because of lack of time and time inefficiency of geometric feature methods, I have decided to go back ICP method, SVD method and so on. For future works, I would like to recommend some ideas about geometric feature methods in report according to reading so many papers related to geometric feature methods. I gave the parameters for registration and I documented registration and filtering part. We are going to meet and assemble all codes and works as a group.
